

## If you can think it, We can build it.

EstateVue kiosk technology is designed to increase the ease of contact for consumers searching for real estate. We give brokers and agents an increased sales advantage by introducing real-time, digital listing technology to the masses in public venues such as shopping malls, airports, and hotel lobbies to name a few.

The EstateVue Touch interactive software provides lead capture capability, and contact requests can be directly funnelled to the acting agent, broker/owner or principal listing agent.

Our presentation software is perfect for large screens and draws major attention to offices and kiosks.

Combine both TV and interactive options and you have a power house of lead and traffic generation for your brokerage.
